

Hendor Drilling & Blasting

Date: 19 January 2021

Dear Resident

Kindly note that blasting will take place on **Friday, 22 January 2021 between 14:00 and 15:00 at the Road Tech - La Montagne Reservoir Project.**

The area to be blasted is on the access road leading to the proposed new Municipal Reservoir which is located on Erf 176 at La Montagne Extension 2 and on Erf 214 at La Montagne Extension 7

The following procedure will take place before and on the day of the blast

1. Blast area is demarcated with notice boards advising that a blast will be taking place.
2. All blasts will be controlled and executed in the safest possible manner (according to the Explosives Act & OHSA Regulations) and should not have any impact on the public.
3. Once the blaster has charged, covered, and prepared for detonation, evacuation of the site will take place.
4. Roll call will be held to ensure all site employees are accounted for.
5. Emergency will be re-communicated at the stage.
6. An audible siren will be sound at least 3 minutes before the blast is detonated.
7. A blast controller will be in contact with all closure positions, as well as the blaster.
8. No on-lookers will be allowed inside the safety perimeter (closure positions)
9. Vibration monitoring will be done from various pre-determined positions.
10. The blaster will communicate with the appointed representative prior to detonating the blast
11. The blaster will communicate with the responsible Road Tech Engineering Representative to advise that all is safe before and after the blast has occurred.

Should you require any additional information, please do not hesitate to contact us.
